Abstract: In this study the research work has been carried out to analysis the comparison of GST revenue in the era of today’s economy. In this research paper introduction of GST which was help to study out the types of GST and what are the diversification has been done by the government to enhance the indirect tax for the levied people. Now in this paper the research methodology has been carried out by the researcher to know the comparison of GST revenue. So here this paper is based on exploratory research design and data are cited in this paper were collected through the secondary source like statistical data available on various website and many more on research paper and literature review as well as from some of the magazines and GSTINDIA TYPING article apart from it carried out the data to done the research analysis for comparison of revenue. The main objective of the study was to gain the depth knowledge to understand the tax system evolution as well as understanding the features and current tax system how to work in regime of GST with collection of revenue. There are some limitation in this paper like data are difficult to find and GST is still maturity phase and data are more fluctuation in the tax regime. In this paper the data analysis carried out by the researcher like year wise GST revenue collection from 2017 to 2019. So her as we seen in the project about GST revenue collection of different year gives you about increasing revenue position after implementation of GST. There is need for more analytical based research for successful implementation result analysis reveals that quarter wise analysis of GST collection showing in increasing ratio of year 2019 rather than 2018.

Keywords: GST, Collection of revenue, Tax.

1. Introduction

GST is one indirect tax for the whole nation, which will make India one unified common market. The GST intends to subsume most indirect taxes under a single taxation regime. GST is a single tax on the supply of goods and services, right from the manufacturer to the consumer. Credits of input taxes paid at each stage will be available in the subsequent stages of value addition, which makes GST essentially a tax only on value addition at each stage. The final consumer will thus bear only the GST charged by the last dealer in the supply chain, with set-off benefits at all the previous stages. This is expected to help broaden the tax base, increase tax compliance, and reduce economic distortions caused by inter-state variations in taxes. This multiplicity of taxes at the State and Central levels has resulted in a complex indirect tax structure in the country that is ridden with hidden costs for the trade and industry. In order to simplify and rationalize indirect tax structures, Government of India attempted various tax policy reforms at different points of time. A system of VAT on services at the central government level was introduced in 2002. The states collect taxes through state sales tax VAT, introduced in 2005, levied on intra-state trade and the CST on inter-state trade. Despite all the various changes the overall taxation system continues to be complex and has various exemptions Since GST subsumed indirect taxes of both central government (excise duty, service tax, custom duty, etc.) and state governments (VAT, Luxury tax, etc.), both the governments now depend on GST for their indirect tax revenue. Therefore, the GST rate is composed of two rates. Intra-state transactions will carry one of CGST and one of SGST (in case of state) or CGST and UTGST (in case of union territory). Therefore, while making an intra-state sale (i.e., sale within the same state), the CGST collected will go to the central government and the SGST collected will go the respective state government in which sale is made. Similarly, SGST or UTGST are replaced with IGST when intra-state transactions are involved.

CGST:
CGST refers to the Central GST tax that is levied by the Central Government of India on any transaction of goods and services tax taking place within a state.

SGST:
SGST full form is State Goods and Services Tax. SGST (State GST) is one of the two taxes levied on every intrastate (within one state) transaction of goods and services.

IGST:
IGST full form is Integrated Goods and Services Tax. Integrated GST (IGST) is applicable on interstate (between two states) transactions of goods and services, as well as on imports. This tax will be collected by the Central government and will further be distributed among the respective states.

UTGST:
UTGST full form is Union Territory Goods and Services Tax.
Tax. The Union Territory Goods and Services Tax, commonly referred to as UTGST, is the GST applicable on the goods and services supply that takes place in any of the five Union Territories of India, including Andaman and Nicobar Islands, Dadra and Nagar Haveli, Chandigarh, Lakshadweep and Daman and Diu.

A. GST Rate in India

All products and services fall under four tax slabs under the GST regime –
- 5% Slab
- 12% Slab
- 18% slab
- 28% slab

2. Effect of GST On Indian Economy

Reduces tax burden on producers and fosters growth through more production. The current taxation structure, pumped with myriad tax clauses, prevents manufacturers from producing to their optimum capacity and retards growth. GST will take care of this problem by providing tax credit to the manufacturers.

Different tax barriers, such as check posts and toll plazas, lead to wastage of unpreserved items being transported. This penalty transforms into major costs due to higher needs of buffer stock and warehousing costs. A single taxation system will eliminate this roadblock.

There will be more transparency in the system as the customers will know exactly how much taxes they are being charged and on what base.

GST will add to the government revenues by extending the tax base.

GST will provide credit for the taxes paid by producers in the goods or services chain. This is expected to encourage producers to buy raw material from different registered dealers and is hoped to bring in more vendors and suppliers under the purview of taxation.

GST will remove the custom duties applicable on exports. The nation’s competitiveness in foreign markets will increase on account of lower costs of transaction.

Boost export and manufacturing activity and leading to substantive economic growth.

Help in poverty eradication by generating more employment.

3. Impact of GST On Consumer

The effects and benefits of GST on Consumers:

A. Reduction in the price of goods and services

GST is a value-added tax that is collected at each level of a supply chain. In the earlier indirect tax regime, in certain cases, the tax paid on procurements was not available for setting off the output tax liability. For e.g. the excises paid by manufacturers were not available for set-off against State-level VAT. So what they did was suppose the manufacturing cost was Rs.100 and the excise paid on it is Rs.12.5. Now, as he won’t get the credit of excise against VAT or Service tax, he will not include or pay VAT on 100 but will make the bill of 112.5 at the time of sale and thus VAT will be charged on Rs.112.5. This is nothing but an increase in cost ultimately. It is known as the cascading effect of tax i.e. (tax on taxes). In GST this cascading effect shall be removed as the Input Tax Credit (ITC) shall be available for all goods and services at each and every stage of the supply chain. So, now the final price of goods and services is expected to be lower due to the seamless flow of ITC between the manufacturer, retailer and service provider. This shall lead to a reduction of cost thereby reduction in prices which is charged to ultimate consumers.

B. Uniform prices throughout the country

In the previous tax regime, we had State Value Added Tax (VAT) which was levied on Sale of goods. As the rate of tax was different from States to States, there was variation in prices. Also, certain taxes and duties (eg. entry tax) was levied only in certain states. As GST is ONE NATION ONE TAX, there is a uniform price for all the products and services throughout the nation, there does not arise any such complexities.

C. Trust in Simpler Tax System

The previous indirect tax structure was very complicated to understand for a layman. GST will increase the level of transparency and trustworthiness of the Consumer on Tax Administrators as well as Business because everything is computerized. This shall boost the trust of consumers in a simplified tax system.

D. Better accessibility of goods and services

As all the goods and services are charged one rate across the nation, the consumer does not travel across the states to make purchases for the purpose of saving tax. Further, the online shopping companies will plan their operations to reduce the lead time, while managing the warehousing facilities, which today are contingent on filling complexities of the present tax structure.

Above all points showed how the GST can benefit the consumers, but there is an adverse effect which is enumerated below:

E. To Burn a hole in the consumer’s pocket in the name of cess and costlier Services

There were many exemptions provided for various Services earlier. But under GST exemptions have been given only where necessary. Thus, the businessmen will pass the ultimate
economic tax burden to the consumers. Also on certain goods like tobacco products, aerated water, motor cars; additional cess is being levied which is known as “compensation cess”; thus making the goods costlier. Moreover, certain services such as accommodation in hotels, work contracts, movie tickets, etc. to get costlier as previous service tax charged was around 15% and the current GST rate charged for them is 18% or 28%.

4. Impact of GST On Traders

Positive Impact on Traders
No dispute good Versus Service:
In present regime of tax structure, the big issue is whether the transaction amount to sale of good or service. Though this dispute still may arise from view of time/place of supply from good or time/place of supply of services as both are separately given. However, net impact is neutral, on either of them needs to pay GST.

Composition levy Increased
In current regime of taxation the limit under Composition Scheme is 40 lakhs whereas under GST it is increased up to 50 Lakhs. It is beneficial as 10 lakhs in turnover is a big thing from trader point of view.

Credit of Excise Duty and Service tax:
In current regime of taxation then a trader is not eligible to take credit of input service as well as the Excise duty. However, in GST regime he will be eligible to take all credits and it will make positive impact on trader.

No Margin to Disclose
Currently a trader who wants to pass on the CENVAT Credit of excise duty needs to obtain dealer registration and have to disclose the margin. But now this is no more relevant as trader is eligible to take credit as well as no requirement of separate dealer registration.

No Reversal of Credit on goods sent for stock transfer
Currently as stock transfer is not liable to VAT as well as CST hence, credit pertains to goods sent to stock transfer needs to be reversed. However, in GST Regime stock transfer got made taxable, hence No reversal of credit is required.

Credit of CST
In current regime of tax, on inter- state purchases CST paid became the cost to the trader as the Credit was not available whereas under GST regime it will be available as IGST Credit.

5. Research Methodology

A. Research Design
This paper is based on exploratory research technique and data cited in this paper were collected via secondary sources available like statistical data available on various websites of Indian Government like Finance Ministry (finmin.gov.in), GST Council (gstcouncil.gov.in), “GST INDIA TYPING” and “INDIA GST NEWS” on internet websites and many more; literature review from journal papers; annual reports; newspaper reports; and wide collection of magazine based articles on GST. Based on the analysis of above-mentioned data collection sources, the objectives of the study are defined and research design is drafted which is highly descriptive in nature.

Objectives of the research undertaken

- To gain an in-depth understanding of GST taxation system evolution.
- Understanding in - depth the concept of new taxation system introduced - Goods and Services Tax (GST) in India.
- Understanding the features, working, and differentiating the current taxation system in India v/s GST.
- To evaluate the collection of GST revenue of different years.
- To Analysis the data yearly wise, monthly wise and Quarter wise comparing them.

Limitation

- The data are difficult to find.
- GST is still in maturity phase, so tax reforms can occur from time to time via GST council meetings regarding finalization of tax rates and even imposition of new rates and even deduction of existing rates.

6. Data Analysis

Yearly wise comparison

- GST revenue collection of 2017, 2018, 2019 (figures in crore)

GST revenue collection of the year of 2017:
As we know GST is implemented in India as on 1st July of 2017. As per ministry of finance the amount of revenue collection in the month of July is Rs. 94063, in August is Rs. 90669, September is Rs. 93141, October is Rs. 83346, November is Rs. 80808, December is Rs. 86703. The average amount of 2017 is 88121.67.
GST revenue collection of year 2018:

Here we are having monthly collection statics from GST Tax, gets revenue from GST tax in monthly in thousand’s crore. The revenue amount collected in January is Rs. 86316, February is Rs. 85174, March is Rs. 103458, April is Rs. 103458, May is Rs. 94016, June is Rs. 95610, July is Rs. 96500, August is Rs. 93960, September is Rs. 94442, October is Rs. 100710, November is Rs. 97367 and December is Rs. 94700. The total average is 95476.08. As we comparing the average data of 2018 is increasing by 8.34%.

GST revenue collection of year 2019:

The GST revenue collection of year 2019, the amount collected in January is Rs. 102000, February is Rs. 97247, March is Rs. 106577, April is Rs. 113865, May is Rs. 10289, June is Rs. 99939, July is Rs. 102000, August is Rs. 98203, September is Rs. 91916, October is Rs. 95380, November is Rs. 103491 and in December is Rs. 103184. The total average is 11174.3. As we comparing with total average of 2017 and 2018 the Average of 2019 is comparatively more. The ratio of revenue collected is increasing by 5.96%. The year of 2019 highly collected revenue as compared to 2017 and 2018.

Quarter wise comparison:

<table>
<thead>
<tr>
<th>Quarter</th>
<th>2017</th>

</tr>
<tr>
<td>Total</td>
<td>528730</td>
<td>1145713</td>
<td>1214091</td>
</tr>
</tbody>
</table>

First quarter:

GST revenue collection on Quarterly base, as we comparing the fiRs.t Quarter of 2018 is Rs. 274950 and fiRs.t Quarter of 2019 is Rs. 305824. The ratio of fiRs.t Quarter of 2019 is increasing by 11.22%.

Second quarter:

The second Quarter of 2018 is Rs. 293084 and second Quarter of 2019 is Rs. 314093. The ratio of second Quarter of 2018 is increasing by 7.16%. So GST revenue collection is more of 2019.

Third quarter:

The third Quarter of 2017 is Rs. 277873, third Quarter of 2018 is Rs. 284902 and third Quarter of 2019 is Rs. 292119. The ratio of 2017 is 2.46 %, ratio of 2018 is 2.52% and ratio of 2019 is 2.53%. As we comparing of three yeasRs. of ratio the year of 2019 is more than 2018, 2017.

Fourth quarter:

The fourth Quarter of 2017 is Rs. 250857, fourth Quarter of 2018 is Rs. 292777 and fourth Quarter of 2019 is Rs. 302055. The ratio of 2019 is by increasing 3.17% as compared to yeaRs. of 2017 and 2018. As we clearly see that collection of GST revenue in the year 2019 has been increased the as compared 2017 and 2018.

Months wise comparison:

7. Result Analysis
The result of the study suggests that the Yearly wise comparison of GST revenue collection. The average GST revenue collection of year 2019 is greater than year of 2018 and 2017.

The result of the study suggests that the quarter wise Analysis of GST revenue collection showing in increasing ratio of year 2019 rather than 2018.

The result of the study suggests that Month wise Analysis of GST revenue collection showing that there is fluctuation Amount collecting of GST revenue collection. As we comparing the three-year data month wise different months collecting revenue is in increasing ratio.

8. Conclusion
The concept of GST was introduced and proposed in India a few year back, but implementation has been done by the current BJP government under the leadership of the Prime Minister Shri Narendra Modi on July 1st 2017. The new government was in strong favor for the implementation of GST in India by seeing many positive implication as discussed above in the project. GST will improvise tax collection and busted of Indian economy y development and break tax barriers between central and state government. No doubt GST will give India a clear and
transparent and taxation system. As we seen in the project about GST revenue collection of different year gives you about increasing revenue position after implementation of GST. There is need for more analytical based research for successful implementation.
